

STOCK TRADERS DAILY

A New Fibonacci Sequence Has Begun

A Fibonacci Sequence has started and if the Market breaks above T1 Fibonacci Resistance (3337) the Market can press higher to T2 resistance, and that would be a material increase. 3414 is T2 resistance in the S&P 500. Past Fibonacci Sequences are telling this is likely, but this should be validated. Please Look at the Fibonacci Sequence Videos from December 26, 2018 and September 2019 to compare.

The videos will explain the difference in Fibonacci Sequences using Real – World Examples.

The first Fibonacci Video was Published in the Early AM on Dec 26, 2018.

This was the best Trading Call in History.* If you look at the time stamps in the charts in the video, you will see that the video was published before the DOW started to move up, and an hour later that same day it started surging. From there, the DOW had its best single day point gain ever, so if the best point gain ever is an identifier of the best trading call in history, and if the time elapsed between when the call was made and the actual move matters too, then here you have it. The call referenced in the video can be substantiated by the email transcript in this PDF: [Best Trading Call Email](#) (includes UCO and AAPL)

However, the power is not in that one-off call, but in the Fibonacci sequence identified therein.

The Fibonacci Sequences:

The Dec 26, 2018 video was not intended to validate the claim above, on Dec 26, 2018 it was being made to substantiate the effectiveness of the Fibonacci Sequence that was taking place at that time, and a new Fibonacci Sequence has started, so this matters. We have thus far seen T1 resistance to T1 support, and thus far back to T1 resistance again, so there is a Fibonacci Sequence already in play.

In 2018 the sequence of Fibonacci Oscillations went from T1 – T1, then T1 – T2, then T2 – T2, then T2 – T3, and that is usually where Fibonacci stair-step Sequences wear out. Each oscillation between the T values was of greater magnitude, so the moves were big, bigger, and then even bigger still.

When T1 – T2 – T3 oscillations take place the moves often result in the market reaching a tipping point, and that is what happened on Dec. 26, 2018, but that is not always true.

During 2019 Our Fibonacci Calculator identified 800 SPX Points during a 1.5-month period too, but the sequence was a little different. In 2019 the T – oscillations were T1 – T1 – T1 instead. The Market defined perfect neutral oscillations between T1 Fibonacci Based support and resistance.

Therefore, the question about this current sequence is, which Fibonacci Sequence will we get this time?

With longer term upward sloping channels firmly intact, and liquidity from the ECB, and Now China, the probability for a T1 – T2 oscillation phase is high.

Videos that show Fibonacci Sequences using Real – World Examples:

1. [Review the T1 – T2 – T3 oscillations from Dec 26, 2018](#)
2. [Review the 800 SPX T1 – T1 – T1 oscillations from 2019.](#)

Afterwards, [Use Our Fibonacci Calculator Yourself.](#)

Important: Our Fibonacci Calculator is probably easier to use than anything you are used to; it was designed like that. Please be prepared for simplicity and do not let that quality distract you from the effectiveness of our Fibonacci Calculator.

*Stock Traders Daily has not validated that this was indeed the best trading call in history, and there could have been another that was given at a better price that same day. The metrics used to define such a claim support the conclusion, but the characteristics that define ‘the best’ may differ from person to person, and there is no scientific study or panel that accepts or refutes these claims.

Disclaimer: Past Performance is no guarantee of future results. Substantial losses may come from investing in the stock market. Consult with your personal financial advisor before making any decisions to invest. These are DIY results.
